CANFORD TAILBOARD PANEL Angled 2U Lemo SMPTE EDW socket
CANFORD TAILBOARD PANEL Angled 2U Lemo SMPTE FMW / FXW plug
CANFORD TAILBOARD PANEL Angled 2U Lemo SMPTE PEW.3K socket

2U 19 inch rack-mounting panels supporting Lemo SMPTE 3K HDTV hybrid connectors primarily for use on the tailboard of outside broadcast vehicles but also suitable for studio or stadia wall-boxes, in 'fly away' racks or flight-case applications. These angled versions, manufactured from a unique 'Z' profile aluminium-extrusion present the connector axis at a 23.5 degree downward angle. This angle relieves strain on the cable connector termination and eases mating during rigging.

Panels are supplied unpopulated as standard, but complete with appropriate connector mounting screws, nuts and shake-proof washers where required. Connector-flange mounting holes in the panel are threaded where appropriate. Connectors or cable assemblies can be supplied or fitted if required.
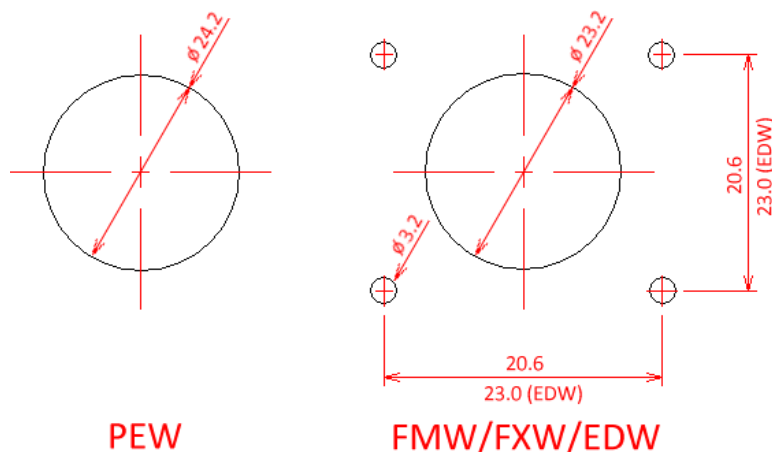

Manufactured from a heavy-duty, aluminium extrusion, the panels have integral bracing at the rear achieving an extremely rigid and rugged mounting.

Connector mounting is uninsulated as is common practice. Panels for connectors with SMPTE fibre larger diameter cables which do not require rear support, are not fitted with a lacing-bar as standard. Metal blanking plates are available for covering unused cut-outs.

A designation-strip holder with snap-on cover is fitted above the connector row. The supplied paper strips may be inserted before or after installation. Printable height is 7.5mm. Templates for printing designation strip labels available as a DWG file for AutoCAD and compatible applications can be downloaded from the appropriate product page on the Canford website.

Available finished in Dawn Grey (BS4800-10A03) or black. Spare designation-strip paper inserts, (not suitable for printers) and 432mm clear covers are available.
